

ITI is the “technical” school for different sectors of industry. It is a secondary school in the Republic of San Marino. Founded in 1981 it provides students with a professional education that equips them with the skills necessary to become an “intermediate expert”.

ITI carries out its mission with the commitment to:

- promote the development of a professional figure who can find work in different fields and adapt to the evolving world

- to train and put into practice a wide ranging program orienting progressively the students to the carrying out of what they have learnt.

The first two years of ITI provide the same formation as the courses of other secondary schools plus a technological and scientific approach and laboratory activities such as Physics, Chemistry, Computer Studies and Autocad. In this way students can successfully continue their studies in the following three years in the schools near San Marino.
